

Senior Resuscitation MCQ Paper (Passing mark - 19)

Name: Daryl Chow

14

1. When you perform CPR, what is the ratio of compressions to breaths for adult?
 - a. 30 compressions to 1 rescue breaths.
 - b. 15 compressions, then 2 ventilations.
 - c. 30 compressions to 2 rescue breaths
 - d. 2 compressions, then 15 ventilations.

(C) ✓
2. Expired air contains how many percent of oxygen?
 - a. 15%
 - b. 16%
 - c. 17%
 - d. 18%

((C) ✓
3. What is "Look, Listen and Feel" means?
 - a. Look for chest rising, listen for breathing noise and feel for warm air at the cheek.
 - b. Look at the face, listen for heart beat, and feel for the pulse.
 - c. Look for help. Listen to others around and feel for the breath.
 - d. Look at the victim body, listen to any noise make, and feel for any injuries.

(a) ✓
4. What is Cardiac Arrest?
 - a. During heart attacks, one or more of the blood vessels which supply blood to the portion of the heart becomes blocked.
 - b. The heart may not be able to pump properly because part of it is dying, and if a large part of the heart is not getting blood, the heart may not be able to pump at all.
 - c. When the heart stops pumping, the victim is in cardiac arrest.
 - d. All the above.

(d) ✓
5. What is shock?
 - a. Shock is a failure of the blood flows through the capillaries, which provide a continuous supply of nutrients and clearance of waste products for all body cells.
 - b. Shock will first affect the brain and then the eyes and then all part of the body.
 - c. Ultimately, life itself may be threatened when in shock.
 - d. Shock is the feeling of dumbness, anxiety and giddiness.

(b) / (A)
6. How do you treat for shock?
 - a. The most likely cause of shock is serious bleeding, or a severe burn or scald.
 - b. Any injuries must be treated immediately.
 - c. Treat any obvious injuries and reassure the victim.
 - d. All of the above.

(d) ✓

7. What is hypothermia?

- a. Hypothermia, sometimes called the cold exposure, is the name given to the condition of people with a body core temperature below 35°C.
- b. The cause of hypothermia is an excessive heat loss due to inadequate protection from wet, cold and windy conditions.
- c. Exhaustion and hunger are also contributory factors.
- d. All the above.

(b) / (d)

8. What is the temperature for hypothermia?

- a. 34* C
- b. 35* C
- c. 36* C
- d. 37* C

(a) ✓

9. How do you treat for hypothermia?

- a. Do not massage arms and legs.
- b. Wrap the victim with blanket, covering the body but not the face.
- c. Call for an ambulance.
- d. All the above.

(b) / (d)

10. What is the function of the pulmonary veins?

- a. The pulmonary veins return the oxygenated blood from the lungs to the heart.
- b. The pulmonary veins carry deoxygenated blood back to the heart.
- c. The pulmonary veins carry oxygenated blood the heart muscle.
- d. The pulmonary veins do the process of gas exchanges for the heart and lungs.

(c) / (d)

11. What is the condition that involves lack of oxygen reaching the brain?

- a. Hypoxia.
- b. Asphyxiation.
- c. All the above
- d. None of the above.

(d) / (c)

12. Describe blood vessels?

- a. Blood vessels are hollow tubes that carry blood.
- b. Blood vessels contain blood for circulation round the body.
- c. Blood vessels are known as arteries, veins and capillaries.
- d. All of the above.

(b) / (d)

13. What does Blood corpuscles consisted of?

- a. Red blood cells.
- b. White blood cells.
- c. Platelets.
- d. All the above.

(d) ✓

21. How to treat victim suffered from electric shock?

- a. Switch off the main current and use a wooden pole to push the victim clear from the power source.
- b. Do not touch anything wet.
- c. Commence CPR if required, only when electrical contact has been disconnected.
- d. All the above.

(d)

22. What is the definition of heart attack?

- a. Blood supply to the heart muscle is suddenly obstructed.
- b. A clot in one of the coronary arteries.
- c. The heart muscle lacking the supply of the oxygenated blood.
- d. All the above.

(d)

23. What are the key factors in controlling bleeding?

- a. R.I.C.E. treatment.
- b. Talk to calm the victim and provide direct pressure.
- c. Lay the victim down in a comfortable position and raise the injured part to reduce the flow of blood.
- d. All the above.

(d)
